

# ZAVATION

## ► Zavation Cervical Plate System

### ► Standard & Midline Cervical Plate System Benefits and Features

- Low profile design
- Simple, visual, and tactile 1/4 turn locking of each screw using the same driver as used for inserting screws
- 8° caudal and cephalad biased angles
- $\pm 10^\circ$  variable angle (4.0mm screw)
- Screws available: variable, fixed, self-drilling, & self-tapping

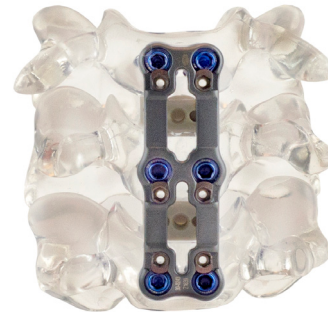

### ► Standard

- Graft and endplate visualization, including partial view between screw holes
- 5° midline biased angle

Midline Cervical Plate

Standard Cervical Plate

| Standard Cervical Plates | Lengths (end-hole to end-hole)                         | Width & Thickness            |
|--------------------------|--------------------------------------------------------|------------------------------|
| 1-level                  | 12 to 26 [2mm increments]                              | 16mm wide<br>2mm thick       |
| 2-level                  | 24 to 34 [2mm increments]<br>34 to 46 [3mm increments] |                              |
| 3-level                  | 39 to 69 [3mm increments]                              |                              |
| 4-level                  | 60 to 84 [4mm increments]                              |                              |
| Midline Plates           |                                                        |                              |
| 1-level                  | 12 to 26 [2mm increments]                              | 10.5mm wide<br>2.3mm thick   |
| 2-level                  | 24 to 34 [2mm increments]<br>34 to 46 [3mm increments] |                              |
| Screws                   | Diameter (mm)                                          | Lengths                      |
| Standard                 | 4.0, 4.5                                               | 12 to 20<br>[2mm increments] |
| Midline                  | 4.0, 4.5, 5.0                                          | 12 to 18<br>[2mm increments] |
