OBLIQUE LATERAL
LUMBAR INTERBODY

**FEATURES
AND
BENEFITS**

LUMBAR
INTERBODY

Amendia is now

AMENDIA.

Safely navigate Kambin's Triangle.

The Zeus[®]-O Lumbar Interbody Device is an oblique lateral lumbar approach (OLLIF) featuring cannulation for safe, over-the-wire implant delivery through Kambin's Triangle. Paired with neuro-monitoring OLLIF spinal fusion, The Zeus-O is a true MIS procedure performed through a single 15mm incision. The bulleted nose of the implant self-distracts for ease of delivery.

The Zeus-O features:

- Innovative PEEK material construction
- Tantalum radiopaque markers to optimize visibility and placement
- Aggressive teeth to prevent implant migration
- Tapered shape to glide past the nerve root
- Bulleted nose to distract intervertebral space during implantation
- High degree of compressive strength and dimensional stability
- Strategically designed to minimize operating time
